1 What are Mediation and Moderation?. Mediation analysis tests a hypothetical causal chain where one variable X affects a second variable M and, in turn, that variable affects a third variable Y. Mediators describe the how or why of a (typically well-established) relationship between two other variables and are sometimes called intermediary variables since they often describe the process ...

[Reporting Mediation and Moderation](#)

Both mediation and moderation involve using a third variable to help explain the relationship between two variables. These two concepts are often confused, but their implications are quite different. Join Meghan Cain, Senior Statistician, for an introduction to performing and interpreting mediation and moderation in Stata.

Moderation. Despite the similarity in the names, a moderation is an entirely different beast than mediation. Moderation indicates that the effect of X on Y is different for different values of Z. In other words, Z moderates (affects) the effect of X on Y. Maybe when Z is large, there is a strong positive relationship between X and Y, but when Z is small, there is no relationship between X and ...

Introduction to Religion 15.2. Religion is defined by its unique ability to provide individuals with answers to the ultimate questions of life, death, existence, and purpose. (photo courtesy of Ras67/Wikimedia) It is commonly said that there are only two guarantees in life – death and taxes – but what can be more taxing than the prospect of one's own death? Ceasing to exist is an ...
